CONSEILS D'ENTRETIEN

La douche doit être nettoyée après chaque utilisation.

Afin d'éviter la formation de calcaire, utiliser une raclette, un chiffon doux ou une peau de chamois. Rincer les résidus de savon avec de l'eau claire après chaque usage. Tous les profileurs en aluminium doivent également être nettoyés pour éviter les résidus de calcaire.

- Ne pas laisser le calcaire s'accumuler.
- Si, malgré tout, vous constatez une accumulation de calcaire, utiliser de l'eau mélangé à du vinaigre.
- Afin de protéger la qualité de finition de votre douche, vous devez la nettoyer avec des nettoyants non abrasifs et non corrosifs.
